

GroundAir MGR (Moisture + Gas + Radon) is comprised of a fibrous core made of recycled polymers wrapped and heat-bonded with a recycled polyester filter fabric. GroundAir MGR is used to *increase air flow* and *improve the distribution of air flow* under the slab or plastic membrane of any structure. Once installed, this flexible pipe / duct allows ground air and gases to flow freely within its 95% open interior structure and effectively channels moisture, soil gases, and Radon to the vent stack and safely out through the roof.

New Construction / Sub Slab • New Construction / Crawlspace • Existing Construction / Crawlspace

Features:

- Adaptable design layout can be easily modified to fit any footprint / area.
- Flexible and easy to install – goes under rigid pipes, conduits, and footers.
- Joint connections can be made using a variety of options.
- Foot or equipment traffic will not damage product or impede air flow.
- Reduces number of suction points needed.

Benefits:

- Lowers Radon and other toxic soil gas levels that would otherwise enter the structure.
- Removes moisture — reducing mold, mildew, and wet basement issues for the life of the structure.
- Lowers lifetime operating costs — saving money and energy.
- Saves installation time — no special connections needed.
